Press Release

NielsenIQ BookData and the Spanish Book Publishers Federation (FGEE) announce new collaboration to deliver Spanish-Language book metadata

The agreement brings together English and Spanish-language metadata to markets across the world, outside Spain and Latin America.

London/Madrid, 19 November 2026 - NielsenIQ BookData (NYSE: NIQ) and the Spanish Book Publishers Federation (FGEE), today announced a new collaboration that will enable BookData to deliver Spanish-language metadata for books published in Spain, as well as Spanish-language titles published globally, to its clients and prospects, which are part of the metadata platform DILVE.

The metadata base DILVE covers information on over 2m titles, and includes 1.1m cover images, released by 9.4k publishing houses.

Records contain comprehensive bibliographic data, including title, author, publisher, publication date, ISBN, format, language, price, subject classification, descriptions, synopses, cover images, and other key metadata elements. The data will be updated daily and delivered in ONIX 3.1 format, enabling straightforward integration into clients' existing systems and workflows.

Under the agreement, BookData will become the distributor of Dilve's Spanish-language book metadata across the world, with the exception of Spain and Latin America. For these two territories, BookData will continue to use the metadata to support its BookScan sales measurement services in Spanish-speaking markets.

The collaboration responds to growing global demand for Spanish-language content and will provide publishers, booksellers, libraries, and other book industry organisations with reliable, up-to-date metadata that supports title discovery, merchandising, and sales. By combining English and Spanish metadata from one source, the collaboration will enable organisations to expand their coverage and better serve multilingual markets.

Andre Breedt, Managing Director at NielsenIQ BookData, said: *"We are delighted to be partnering with DILVE on this exciting new chapter for BookData. Spanish is one of the world's most widely spoken languages, and demand for Spanish-language content continues to grow across international markets. By bringing together our shared expertise in metadata with BookData's global reach, we're making it easier for our clients to enrich their catalogues, serve multilingual audiences and improve discoverability across the global book supply chain."*

José Manuel Anta. Managing Director at FGEE said: *"The collaboration with NielsenIQ BookData will make metadata for titles published in Spain available to the entire international book ecosystem (bookshops, distributors, libraries, platforms…), a significant development, given that Spanish is one of the world's major languages, with 640 million native speakers and millions more who speak it as a second language, a trend bolstered by the global reach of Spanish-language music, films, and series".*

About FGEE
The Spanish Book Publishers Federation (FGEE) is a private-law entity, established in 1978. Its membership comprises major regional publishers' associations and guilds in Spain. Its mission is to represent and defend the Spanish publishing sector.

The Federation's primary activities include defending intellectual property, facilitating the participation of Spanish publishers in international book fairs and trade missions, promoting and organizing LIBER, the major Spanish professional trade fair for the publishing industry, representing publishers within international organizations in the sector, engaging with public authorities and preparing reports on the book trade and reading habits

About DILVE
DILVE-ISBN is a centralized platform managed by the FGEE that enables publishers to upload, enrich, update, and automatically distribute their catalogue information throughout the entire commercial supply chain. Furthermore, it is a industry-wide technological infrastructure that allows for a single data upload by publishers; it automates the request and management of ISBNs using the very same data entered into the platform, thereby saving time and costs while preventing duplication.

The platform features a database containing over 2 million books (representing 99% of Spanish publishing catalogues) released by 9.410 publishing houses.

Forward Looking Statement for Press Release

This press release regarding NielsenIQ BookData and FGEE's collaboration to deliver Spanish-Language book metadata contains "forward-looking statements" within the meaning of the safe harbor provisions of the U.S. Private Securities Litigation Reform Act of 1995, including statements regarding the projected size and growth of India's print book market through FY 2030–31; anticipated developments in print, digital, educational and scholarly publishing; the potential effects of technology, artificial intelligence and policy developments on the publishing sector; and future opportunities for industry growth, innovation and investment. Forward-looking statements may be identified by words such as "anticipate," "expect," "project," "forecast," "believe," "potential," "may," "could," "should," "will," "would" and similar expressions. These statements are based on current estimates, assumptions, available data and the methodology described in the report and are not guarantees of future results. Actual outcomes may differ materially due to changes in consumer demand, economic conditions, inflation, book pricing, currency movements, technology adoption, regulation and government policy, data availability, market definitions, competitive conditions and other factors. Readers should not place undue reliance on these statements. Forward-looking statements speak only as of the date of this press release, and we undertake no obligation to update them, except as required by applicable law.
